VIT BHOPAL UNIVERSITY

DIGITAL LITERACY PROJECT REPORT

- COURSE CODE: - CSE0001
- COURSE TITLE: - DIGITAL LITERACY

- NAME: - Shruti Srivastava
- REG. NO: - 25BAI10911
- BRANCH: - CSE AI/ML
- YEAR: - 1ST YEAR B-TECH
- INSTITUTION: - VIT BHOPAL
- DATE OF SUBMISSION: - 29/3/26

- **Introduction:**

The digital literacy goes way beyond just trying out the new technology, it is learning how to communicate, share and share ideas online to create various digital projects. The main objective is not just putting together a portfolio to say you are tech savvy but rather demonstrate that you have the ability to communicate, work with others and keep your name, reputation clean in the world of internet.

Instead of reading a theory, this course requires for you to do projects that develop skills in short amount of time. All these practical skills are beneficial to you now and in the future

It has been very exciting for me to see first-hand how technology skills can create opportunity for you academically today and for your future professional career.

It has helped me understand the importance of responsible digital conduct and hoe to effectively use technology to enhance learning and career opportunities

- **TASK #1: -**

I created this infographic using Canva program to make the concept of digital literacy easy for the student to understand. My design focuses on three main areas:

a. Understanding digital literacy
b. Safe internet practices
c. Email etiquettes

Each section highlights some main points such as using digital tools, evaluating online information, protecting personal data and maintaining professionalism in an email.

I used a simple layout with minimum text and relevant icons for the data to be easily understood. The goal was to make an infographic that is visually appealing with minimal text. I also maintained a consistent colour scheme and even spacing to improve the readability and overall design.

One challenge I faced was to only select main and to the point information and making it concise for better understanding. As the digital literacy topic is vast with many different and important sub topics. I found it hard to select the main topics. This project helped me gain the ability to simplify complex topics and data and understand them better. It also enhanced my designing skills.

- **TASK #2: -**

In this task, I built up and updated my digital profiles on several sites (GitHub LinkedIn and Kaggle) to create a professional presence online. On GitHub, I wrote a README file that contains information about my education, interests, and projects which I have done, this shows my first experience writing software.

I updated my LinkedIn profile by adding my education details, including me pursuing my degree in BTech Cse Ai/ml at VIT Bhopal University. This tool is going to help me build an

online professional identity and help me connect with other professionals in my field. I also set up a Kaggle account to also gain access to data science tools and resources.

Each of these platforms has a different role in my professional presence. On GitHub, I can collaborate with others on my projects or share them. I can connect with professionals through LinkedIn. With Kaggle, I can improve and learn skills related to data science. I intend to use these three resources over the next four years to enhance my technical abilities and create a portfolio of completed projects, all while building a professional social network.

- **TASK #3: -**

In Task 3, I was able to explore coding and collaboration tools to get a deeper understanding of their application in academics. In the coding section of this task, I created an account with HackerRank and attempted a beginner-level problem called "Solve Me First." This helped me get a basic understanding of how coding works. I was able to get hands-on experience with coding by writing the code and submitting it.

In the collaboration section of this task, I created a Google Form with the title "Digital Literacy Awareness Quiz," consisting of five questions. The questions included multiple choice and short answer types. The Google Form was designed to test basic knowledge of digital literacy concepts. I also added a Google Sheet to the form to automatically collect responses. The tools used in this task are useful in both learning and collaboration. The coding tool helps in developing problem-solving skills, and Google Forms and Google Sheets are useful in collecting data. This task helped me get a deeper understanding of how digital tools can be effectively used.

- **TASK #4: -**

From Task 4, I have learned the importance of professional communication and online behavior. I have attempted to write two formal emails. In the first email, I have expressed the need to extend the deadline for the assignment. In the second email, I have expressed my interest in the internship. I have learned the importance of formal email writing in professional communication.

I have prepared a list of do 's and don'ts for social media to emphasize the importance of online behavior for students. Online communication is essential for students. Miscommunication or improper communication through digital media will have a negative impact on students. For example, if students send improper or ambiguous emails to teachers, there is a possibility of miscommunication or ignoring the student. This can be avoided by maintaining a proper tone and structure in communication.

- **TASK #5: -**

In this task I have learned the concept of "cybercrime" through the means of "Ransomware" as it is the most common type of cybercrime in India. While researching cybercrime, I was surprised to learn how easily people can become victims of online fraud, especially through simple mistakes like clicking unknown links or approving

payment requests. I did not realize that attackers often make their messages look genuine, which makes it difficult to identify scams.

This task helped me understand how serious cyber threats can be, especially in areas like online payments and data security. I also learned about important safety measures and reporting methods such as the National Cyber Crime Portal and helpline number 1930.
